

## Assignment2: Software Requirements Specification

*Objective:* Software requirement elicitation

You have been given a project description. Work with your team to understand the requirements to yield a draft set of requirements and questions to understand the requirements.

- Identify the requirements and document them. They must be written as formal requirements that include the overall description and specific requirements of your project.
- Document the requirements on your project repository.
- Be prepared to present the requirements and ask any questions you have identified during the elicitation phase. Also, be prepared to document the feedback you get from your customer.
